

Project Presentation Outline

Your group will have to present your project during the class time on the assigned day.

1. Generally, your presentation should provide answers to the following:
 - What was your team project? Establish required background for the problem domain so that everyone knows what you are talking about.
 - Establish a motivation for your problem domain. Why is this important project?
 - Describe the dataset.
 - Briefly explain the methods and models. If you did any original research then describe your novel contributions.
 - Discuss briefly your experimental results – present figures, graphs, tables.
 - Implementation:
 - Discuss tools/technology used.
 - Did you write your own libraries or used a third party library.
 - Be prepared to give a live demonstration of your application (by running the code) such as features, performances, etc. For a machine learning based system it may or may not be possible for the training to end within the given presentation time. Taking a small amount of training data during demonstration would help show the complete working.
 - Conclude by
 - Telling the audience of your 1-2 accomplishments from the project that your group is most proud off.
 - Discuss challenges in the project, what you learned, and what you would change if you could release next version, and why.
2. Each member of your group **MUST** present part of the presentation
 - a. Each member should equally split the presentation time, e.g. each member takes around 4 minutes to present in a team of four members for a total of around 15 minutes. You would want to leave a couple of minutes for audience questions towards the end and a couple of minutes in the beginning for setting up your presentation. **Your presentation must fit within the 15 minutes allotted time slot plus 2 minutes for audience questions. You are strongly encouraged to rehearse your presentation beforehand (believe it or not, this is not a long time for a presentation).**
 - b. It is a good idea to prepare slides. You would have to turn in your presentation slides along with your project's final documentation.
